About the Placement:

Detailed Placement Description

Paicines Ranch is 7500 acres of holistically managed, certified organic rangeland and

irrigated cropland located on the central coast of California. Our focus is on how to imagine, design, create and manage agricultural practices that build and support ecosystem health, are economically viable and socially inspiring. The ranch is in the early stages of several innovative design and establishment projects as well as ongoing management including:

- o A diverse polyculture vineyard that will be managed using planned grazing of sheep throughout the year
- o Conversion of conventionally managed organic row crops into a polyculture of no-till crops (forage, grain, seed, vegetable and herbs), orchard crops, silvopasture and planned livestock grazing
- o Onsite composting/vermicomposting operation in order to reduce offsite fertility inputs and increase soil health on farmland and rangeland
- o Management of a trial farm, ranch garden, headquarters agriculture projects
- o Baseline and ongoing ecosystem monitoring of the entire ranch including soil carbon and soil biology, wildlife and plants
- o Maintenance of infrastructure on 6700 acres of rangeland

Our employees are passionate about grazing and farming systems that significantly improve soil health, biodiversity, nutritional quality of foods and quality of life for the people and communities involved in agriculture. The position will involve working in all aspects of farming, livestock management, infrastructure development, planning, design, research, monitoring, and day-to-day work.

Primary Production :

Cattle, cover crops and vineyard start-up

About the Internship:
